

FOR IMMEDIATE RELEASE

Orbism and Magoo Software Announce Partnership

[7 July 2005: London, UK] Orbism, a leading SOA consultancy, and Magoo Software have today announced a partnership to deliver advanced SOA solutions. The alliance combines Orbism's expertise in the design and implementation of Service Oriented Architectures with Magoo Software's unique client technology to deliver sophisticated user interaction for SOA.

"The human element is a critical yet often overlooked aspect of SOA design" commented John Fleming, Orbism CEO. "The biggest challenge is enabling business users to work directly with XML. MagooClient is the first piece of technology to automate creation of user interfaces for SOA and allows us to rapidly add user interaction to solutions built to the SOA model".

"Orbism have a proven track record in delivering Web Services and SOA solutions" said John McGuire, CEO at Magoo Software. "We're delighted to partner with them to provide user interface capability for SOA. The combination of Orbism's expertise and MagooClient significantly reduces the cost and time to implementation for SOA projects."

MagooClient is a SOA Messaging Client which can automatically render and validate XML messages thereby allowing even non-technical users to interact with SOA Services. This removes the need for the time-consuming and expensive development of user client applications and is in keeping with the flexible nature of today's Service Oriented Architectures. The product is fully compatible with Web Service, Enterprise Service Bus and messaging technologies from leading organizations including Apache, BEA, Cape Clear, IBM, Microsoft, Sun and WebMethods.

Key features:

- XML Messaging Client for HTTP, JMS and email.
- Integrated form-based, auto-validating XML Editor
- Comprehensive support for XML and Web Services standards.
- Managed local archive for asynchronous messaging.
- Integrated JavaScript + XML environment
- Cross-platform, Java-based solution.

About Magoo Software

Based in London, UK, Magoo Software provides technology to allow user interaction to be quickly and easily added to Service Oriented Architectures. For further information on Magoo Software and MagooClient please see www.magoosoft.com.

About Orbism

Orbism provides J2EE architecture and deployment expertise to financial and telecoms organizations. Orbism consultancy services de-risk the design phase and shortens the 'build-test- deploy cycle', getting the application into production rapidly and robustly. The company has been providing expertise in design and delivery of enterprise middleware since 1996. For more details, please see www.orbism.com
